

## CLAIMS

I claim:

1. A barrier system having pre-existing fence posts comprising:

a first fence panel having a first end and a second end;

a second fence panel having a first end and a second end;

a cavity formed in each first end, whereby said first end of each panel is adapted to fit around a respective pre-existing fence post;

first releasable attachment structure disposed on said first end of said first fence panel; and

second releasable attachment structure disposed on said first end of said second fence panel, whereby adjacent panels are adapted to be releasably secured to said respective pre-existing post.

2. The barrier system according to claim 1, wherein said first releasable attachment structure comprises connector projections.

3. The barrier system according to claim 1 wherein said second releasable attachment structure comprises connector slots.

4. The barrier system according to claim 1, wherein said first and said second releasable attachment structure comprise threaded fasteners that extend through said first end and said second end of adjacent fence panels.

5. The barrier system according to claim 1, wherein each panel is horizontally corrugated.

6. The barrier system according to claim 1 wherein each panel presents a flat planar surface.

7. The barrier system according to claim 6, including a vertically oriented reinforcing strut disposed on said flat planar surface.

8. The barrier system according to claim 1, including a post cap releasably secured to each of said pre-existing fence posts.

9. A barrier system having pre-existing fence posts comprising:

a first fence panel having a first end, a second end and a height;

a second fence panel having a first end, a second end and a height;

a cavity formed in each first end, said cavity being coextensive with said height of said respective first fence panel and second fence panel, whereby said first end of each panel is adapted to fit around a respective pre-existing fence post;

first releasable attachment structure disposed on said first end of said first fence panel and said first end of said second fence panel; and

second releasable attachment structure disposed on said first end of said first fence panel and said first end of said second fence panel, whereby adjacent panels are adapted to be releasably secured to said respective pre-existing post; and

including a post cap releasably secured to each of said pre-existing fence posts.

10. The barrier system according to claim 9, wherein said first releasable attachment structure comprises connector projections and wherein said connector projections extend approximately one-half the height of said first fence panel and said second fence panel.

11. The barrier system according to claim 10, wherein said second releasable attachment structure comprises connector slots and wherein said connector slots extend approximately one-half the height of said first fence panel and said second fence panel.

12. The barrier system according to claim 11, wherein each panel is horizontally corrugated.

13. The barrier system according to claim 11 wherein each panel presents a flat planar surface.

14. The barrier system according to claim 13, including a vertically oriented reinforcing strut disposed on said flat planar surface.

15. A barrier system having pre-existing fence posts comprising:

a first fence panel having a first end, a second end and a height;

a second fence panel having a first end, a second end and a height;

a cavity formed in each first end, said cavity being coextensive with said height of said respective first fence panel and second fence panel, whereby said first end of each panel is adapted to fit around a respective pre-existing fence post;

first releasable attachment structure disposed on said first end of said first fence panel and said first end of said second fence panel; and

second releasable attachment structure disposed on said first end of said first fence panel and said first end of said second fence panel, whereby adjacent panels are adapted to be releasably secured to said respective pre-existing post.

16. The barrier system according to claim 15, wherein each panel is fabricated by molding.

17. The barrier system according to claim 15, including fasteners for attaching the second end of said first fence panel to a third fence panel.

18. The barrier system according to claim 17, including fasteners for attaching the second end of said second fence panel to a fourth fence panel.
